

## Where can I find the Model/Type Number?

For the majority of the products the **model name** or **number** is placed well visible on the housing. For some of them the model name/number will only be present on the packaging and instruction manual and not on the product itself.

Should this information ever get misplaced, a **four-digit type number**, which is imprinted on **all** products, can be used to determine the appropriate part(s) for your product.

Example for a 4-digit Type number  
(Type: 3757)

The following is a guide that can be used to help locate the **type number** on your product.
